Claims 1, 3-5, 7 and 9-11 are rejected under 35 USC 103 as unpatentable over the Prior Art (Applicants fig. 4) (Referenced by applicant as AAPA) in view of Koshino and further combined with Takagi.

The Prior Art (applicant's fig. 4) teaches the specific SAW configurations but he jumper wires cross the electrodes and/or reflector elements. However, Koshino (Figs. 6b, 10, 14, 16-18, 20, 21, 23 & 25) teach connection of multiple SAWS to the terminal pads via jumper wires that are specifically routed so as not to cross over any electrode or reflector fingers. Such constructions would eliminate possible unwanted capacitive coupling and possible short-circuiting during manufacturing. Takagi (Figs. 1 and 2) teaches placing all bonding pads outside the area between two longitudinally coupled resonators #10, #12, #209-#214. Thus, despite applicants comment that providing bonding pads outside the prescribed area as not being obvious due to undesirable lead line lengths, the prior art explicitly teaches this structure in Takagi.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
